**Research interests:** My PhD thesis examined new processes of innovation development

occurring in India: inclusion of the informal sector that produces grassroots innovation in the Indian innovation system through the institutional networking of research and educational organisations, private enterprises and governmental agencies at the federal and regional level. Indian experience in inclusion of grassroots innovation in formal innovation system opens new prospects for innovation development of countries with large informal sector of economy and might be useful for many developed countries in terms of support of social innovation.

In my current research work I am focusing on study the following issues:

- 1) changes of innovation systems occurring due to the growth of innovation activity of society (experience of India).
- 2) taxonomy of the innovations for inclusive development.
- 3) grassroots innovation (GRI) phenomenon in BRICS.
- 4) GRI in Russia.
